Using API

Data.census.gov can be cumbersome

- Especially when wanting many, but not all geographies
- When wanting to extract data from multiple tables
- When automating

Example Census Bureau API request:

https://api.census.gov/data/2023/acs/acs5?get=GEO_ID,NAME,B14003_006E,B14003_015E,B14003_024E,B14003_034E,B14003_043E,B14003_052E&for=county:*&in=state:36

Example API call elements

https://api.census.gov/data/2023/acs/acs5?get=GEO_ID,NAME,B14003_006E,B14003_015E,B14003_024E,B14003_034E,B14003_043E,B14003_052E&for=county:*&in=state:36

Domain		https://api.census.gov/data
Path	Year/survey/product	2023/acs/acs5
Query	Get parameter (list of fields to retrieve)	get=GEO_ID,NAME,B14003_006E,B14003_015E,B14003_024E,B14003_034E,B14003_043E,B14003_052E
	Geography parameters	for=county:*&in=state:36

Finding variable names

- Variable names are: TableID_RowNumber(Postfix)

- Can find them:
  - Documentation on available APIs
  - Table shells
  - Download table as .zip from data.census.gov and open Column-Metadata:

Default response in web browser

Adding &outputFormat=csv

https://api.census.gov/data/2023/acs/acs5?get=GEO_ID,NAME,B14003 _006E,B14003_015E,B14003_024E,B14003_034E,B14003_043E,B1400 3_052E&for=county:*&in=state:36&outputFormat=csv

- When used in browser:
  - Creates and downloads a .csv file that can be opened in Excel

Put data in an Excel Table, create Query connection

Behind the scenes: Power Query

- Power Query is a tool embedded in Excel
  - Retrieve data (from file or API)
  - Filter rows/columns
  - Change data types
  - Clean data
  - Sort
  - Add columns based on calculations
  - Combine data sources (merge and/or append)

Out of scope for this presentation

Limitations of this process

- Result often doesn't have information on API call used

- API Results come from one data product, year and set of geographies at a time
  - Often need for combining data from different API calls

- Excel macros can overcome some of these limitations
  - Making use of Power Query capabilities
  - Macros enable multiple calls and automatic data manipulation

Excel macro demo

Ultimate goal: create a table with select variables or derived variables for a set of geographies from one or more Census Bureau data tables

Two worksheets that define the desired content

- One to define the rows (geographies)

- One to define what variables needed to produce the columns (select variables or derived variables)

Define geographies

Requests for multiple geographic levels:

- New York State

- Counties in the Southern Tier

- Sub-county areas in Albany County

- Ithaca City School District

- Tompkins-Seneca-Tioga Boards of Cooperative Educational Services (BOCES)
