

# All Asians are Not Alike:

## Using ACS and Administrative Data

### Estimates of Asian Subgroups in Political Districting / Redistricting

# Custom Demographic Research

# Silicon Valley (California) Asian Subgroups:

**Recent increase of Asian high-tech immigrant workers**  
from China and India  
well-educated  
naturalized & politically involved

**Asian subgroups want separate recognition during redistricting**  
like separate COIs for Cubans and Mexicans within the  
“Hispanic” category

# Silicon Valley Asian Subgroups:

Recent increase of Asian high-tech immigrant workers  
from China and India  
well-educated  
naturalized & politically involved

**Asian subgroups may want separate consideration during redistricting (separate communities of interest)**

- **Afghans**
- **Similar to separate consideration of Cubans/Central Americans/Puerto Ricans/Mexicans within the “Hispanic” category**

Two Silicon Valley case studies: Asian Subgroups

# Redistricting Data on Race/Ethnic subgroups: PL data aren't enough

**2020 Census official counts (PL 94-171)**

***NO ASIAN SUBGROUPS***

***2010 Census data (SF2) for Asian subgroups***

- **2015-2019 American Community Survey (ACS) estimates:**  
Citizenship Voting Age Population (CVAP) rates by race and ethnicity  
***(including separate Asian subgroups)***

**Voter registration & turnout estimates, *by surname***  
***California Statewide Database***

# Two Case Studies involving Asian Subgroups:

## 1. City of Fremont, Calif, moved from at-large to District elections

Afghan population wanted recognition as a distinct community of interest (mostly their downtown business locations)

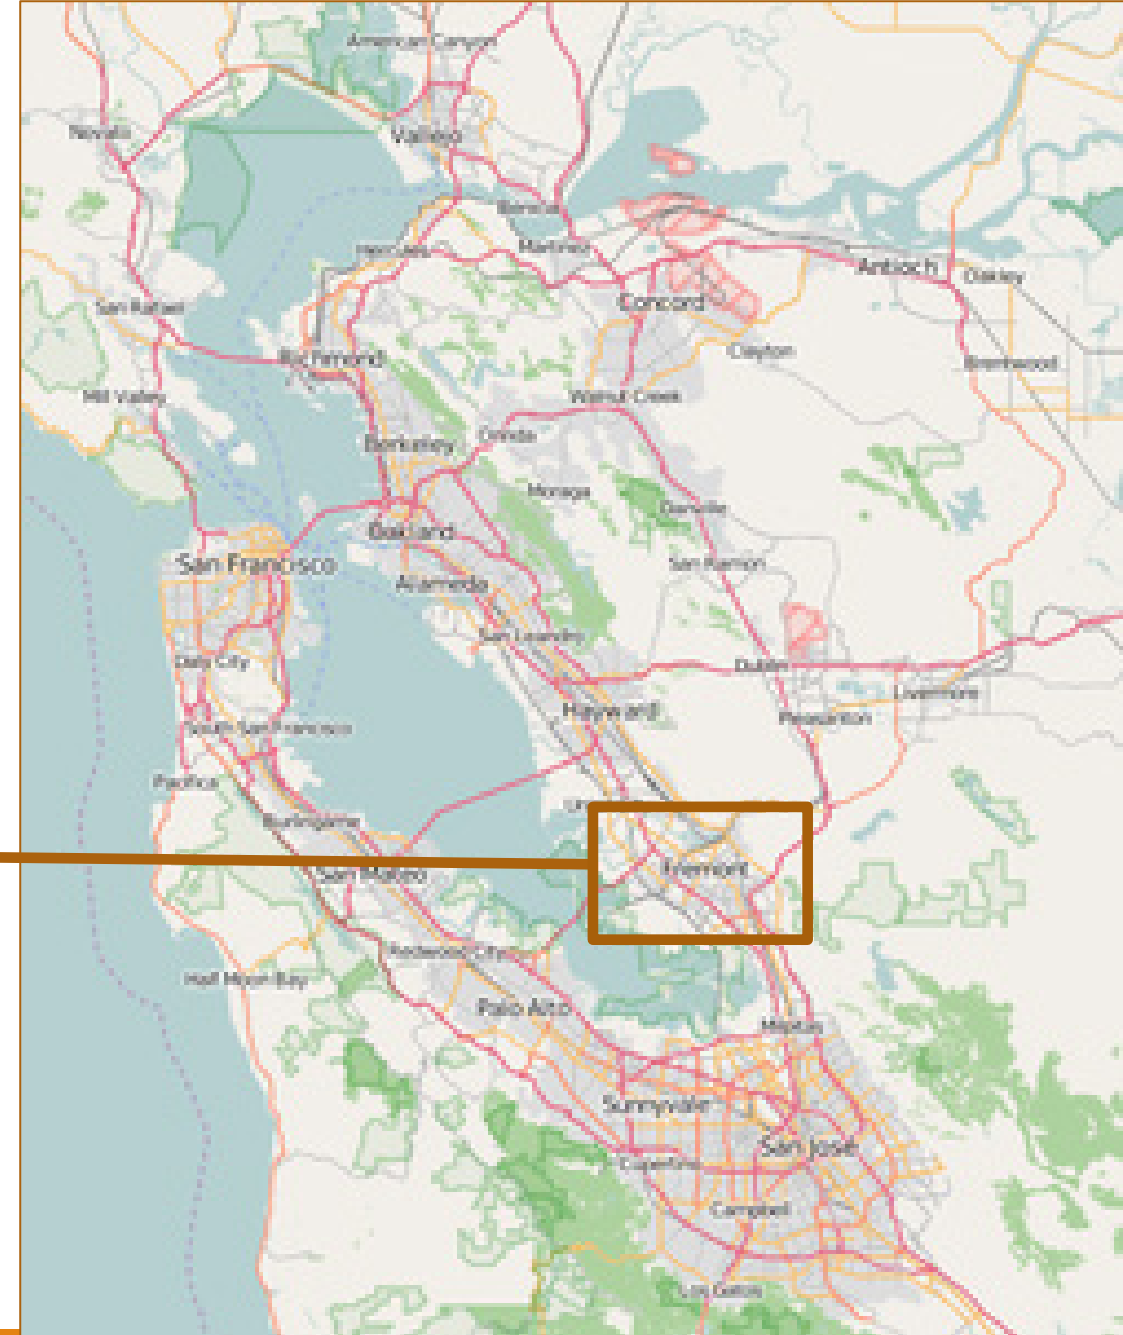

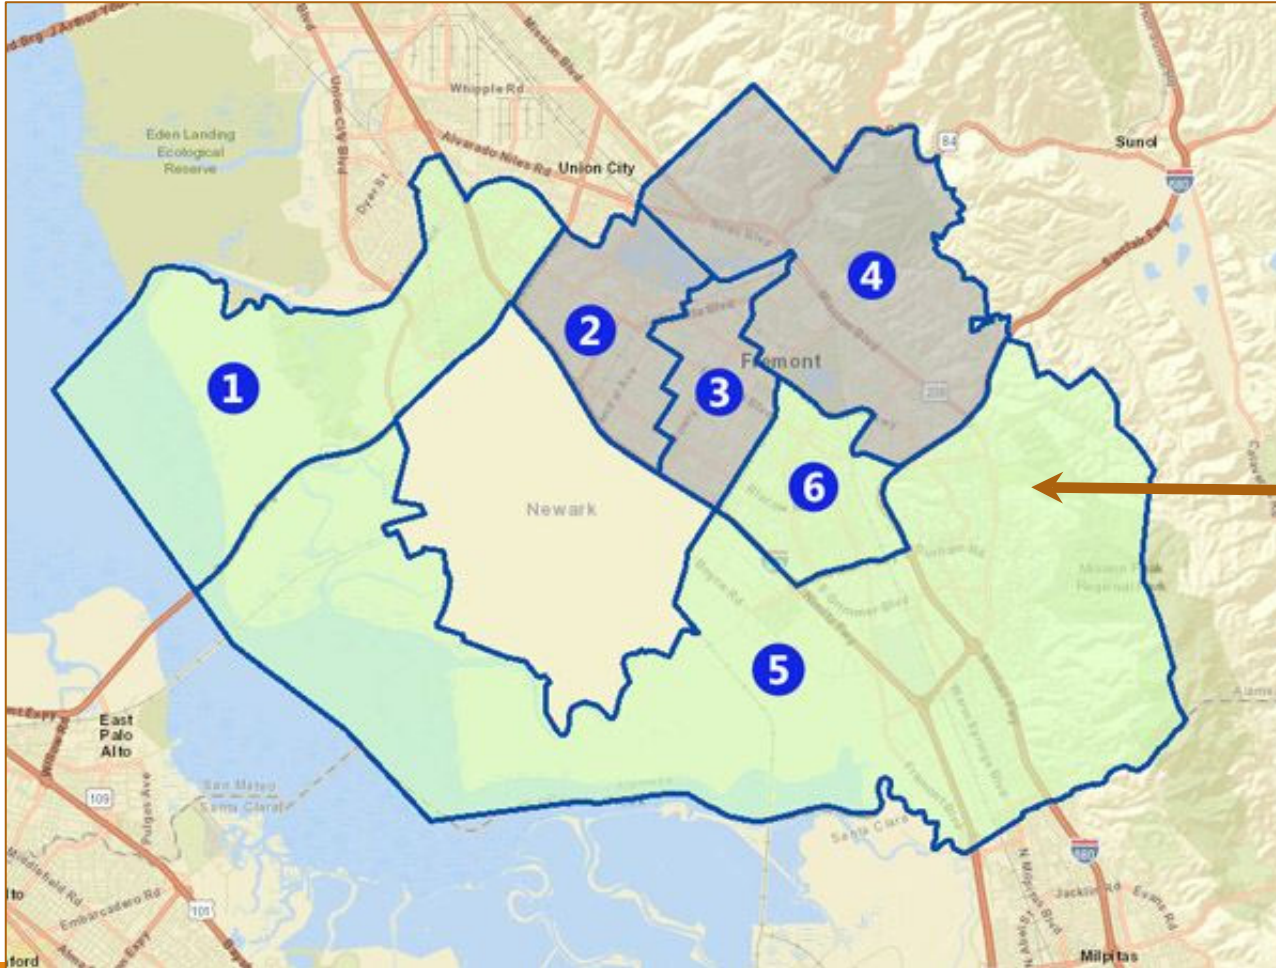

## 2. Client considering whether to move to by-district elections

Board members want to treat Chinese and Asian Indians as separate communities of interest (COIs)

# Case Study 1

## City of Fremont, California

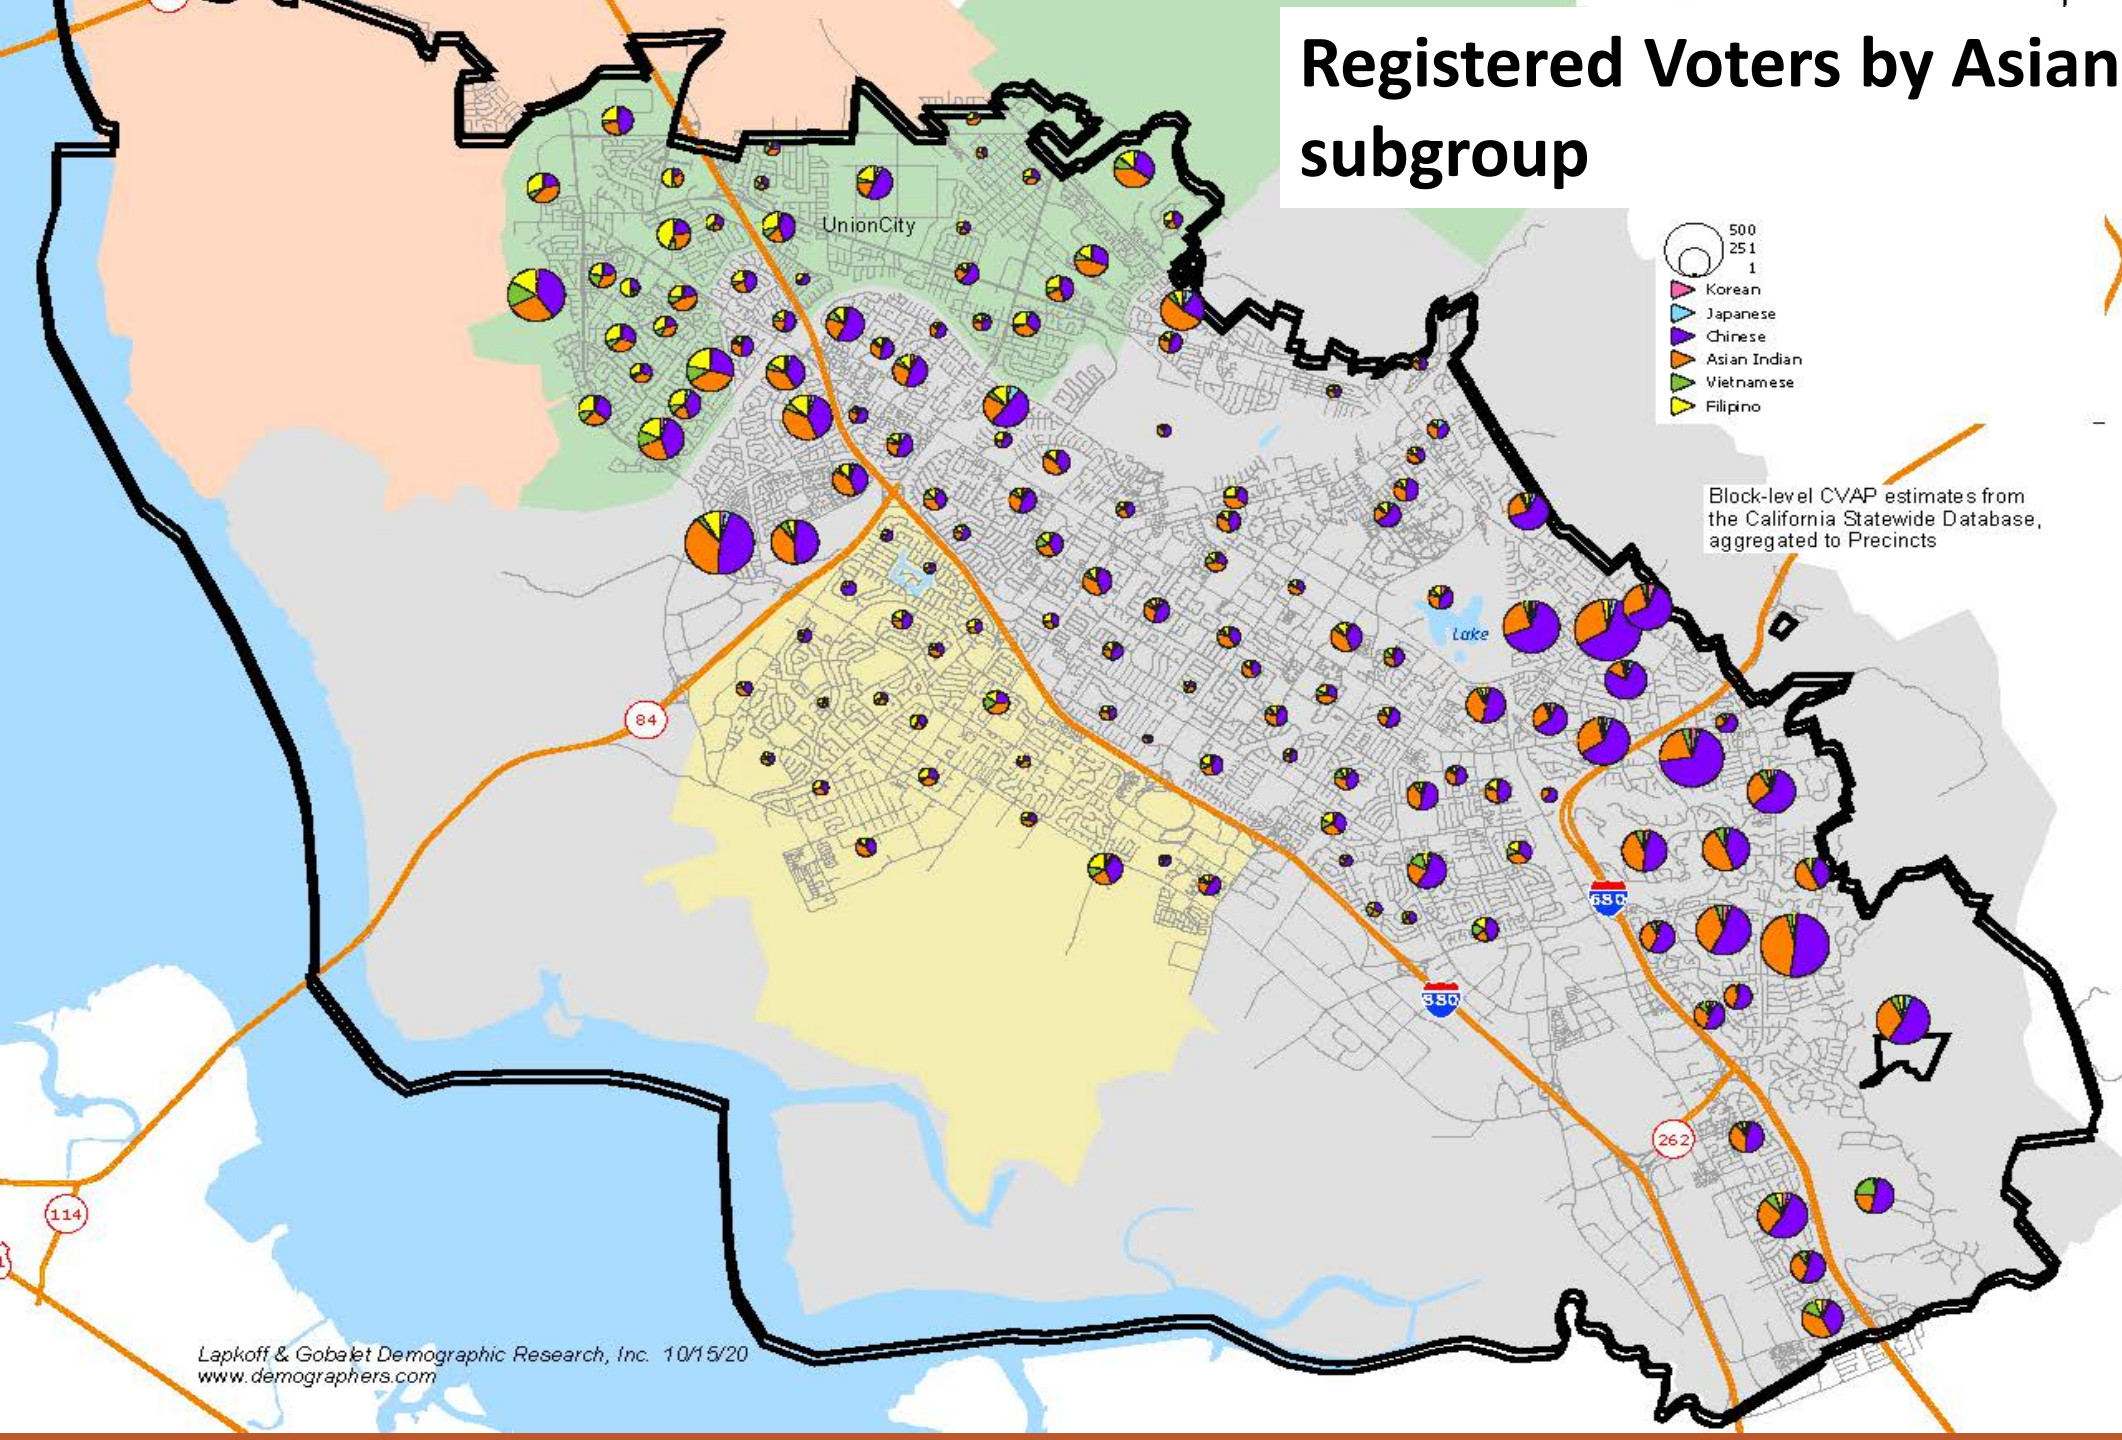

# LGDR's 2017 districting work for the city of Fremont, CA

# Registered Voters by Asian surname subgroup

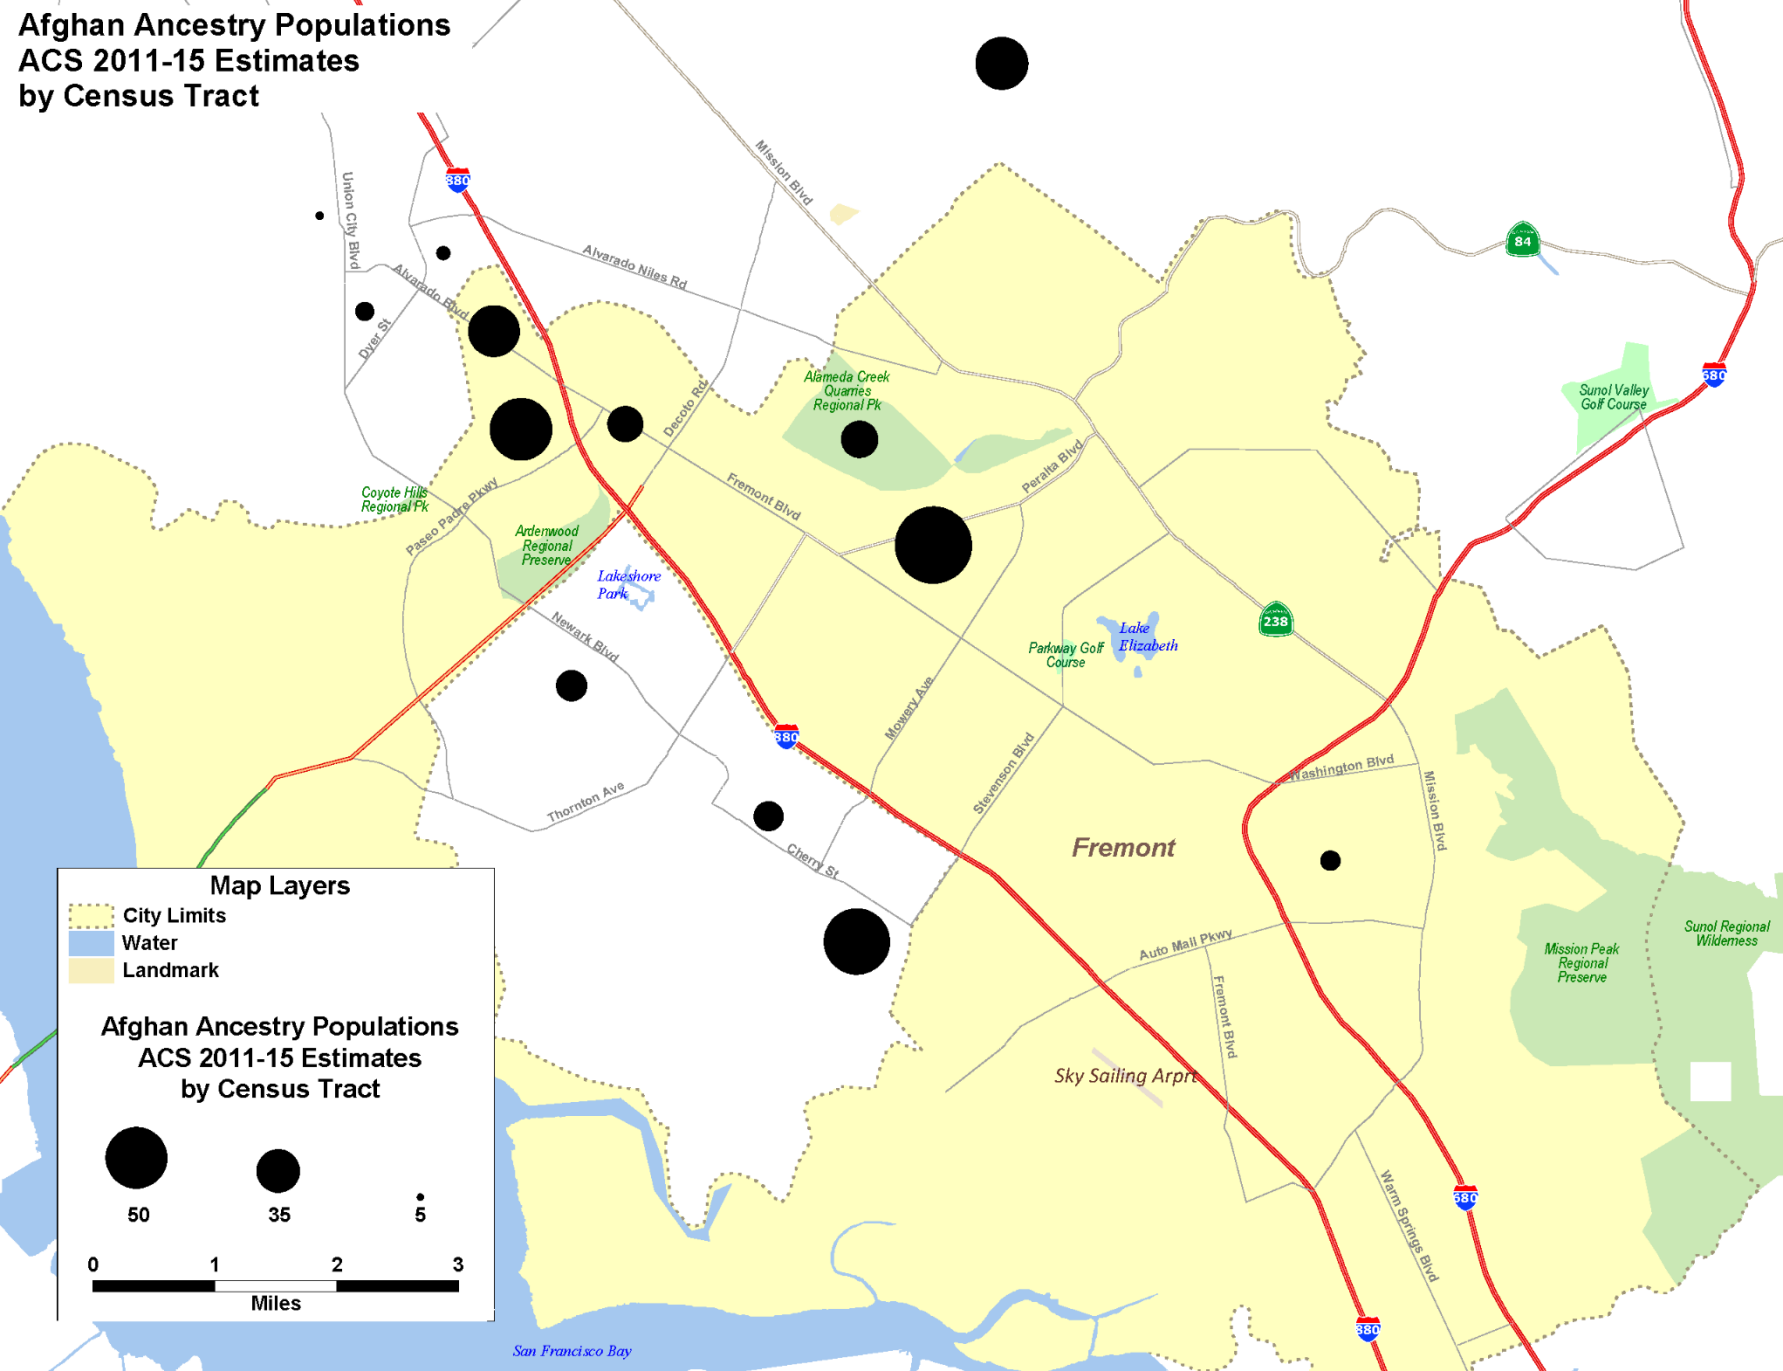

# Afghan ancestry population estimates from ACS

(self-identified community of interest)

**Caveat:**  
*Afghan populations are much smaller than those of other groups.*

*Proportional symbols are a different scale than previous maps:*

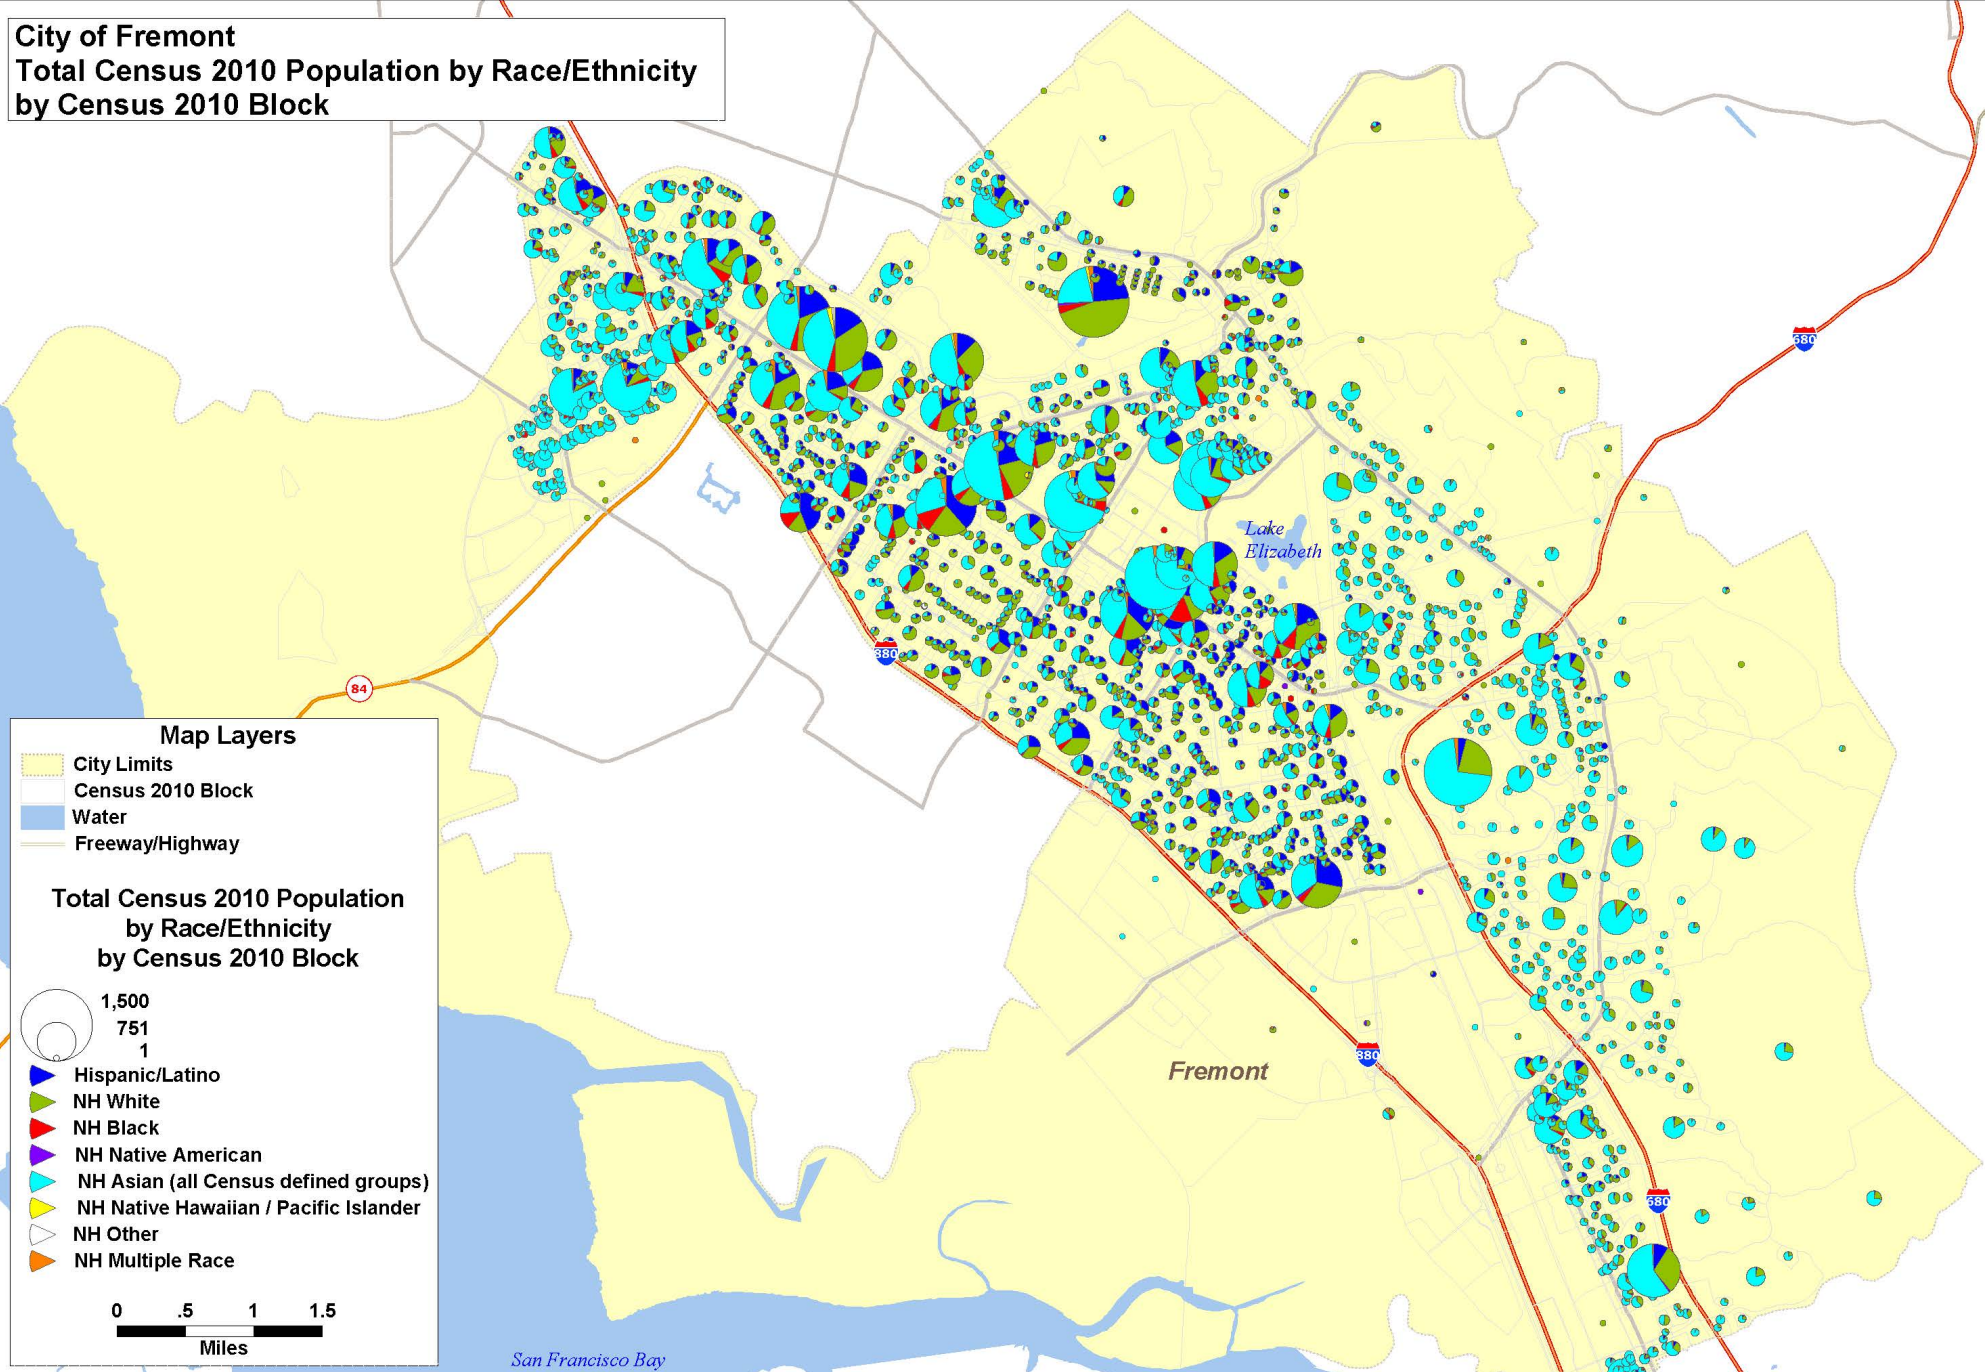

# Fremont's 2010 race/ethnic populations

by 2010 Census  
block

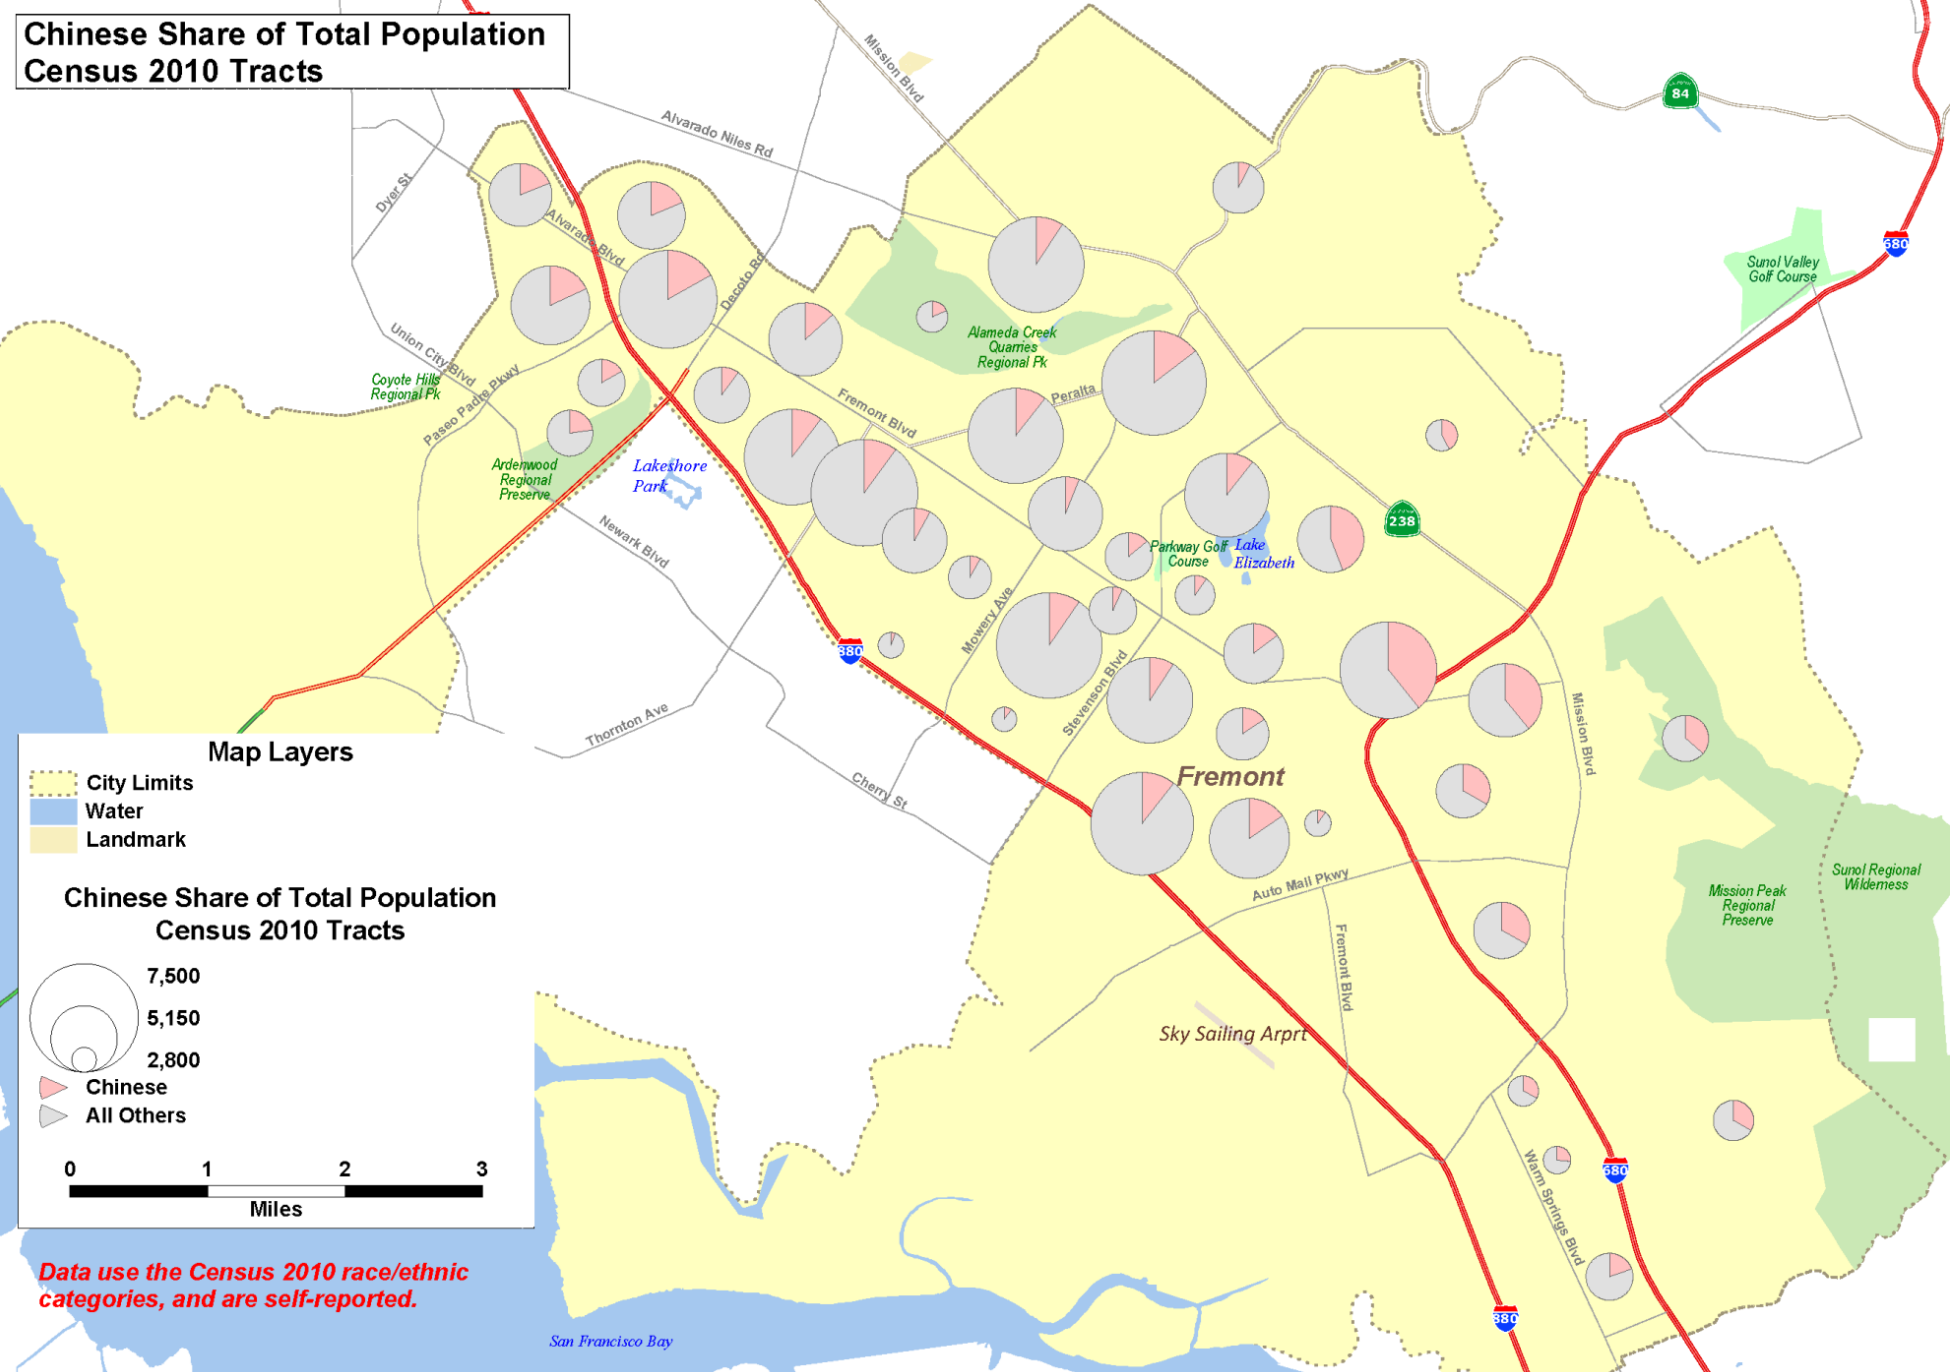

PL 94-171  
redistricting  
categories

# Chinese subgroup population

2010 Summary  
File 2  
population  
counts

(self-identified  
community of  
interest)

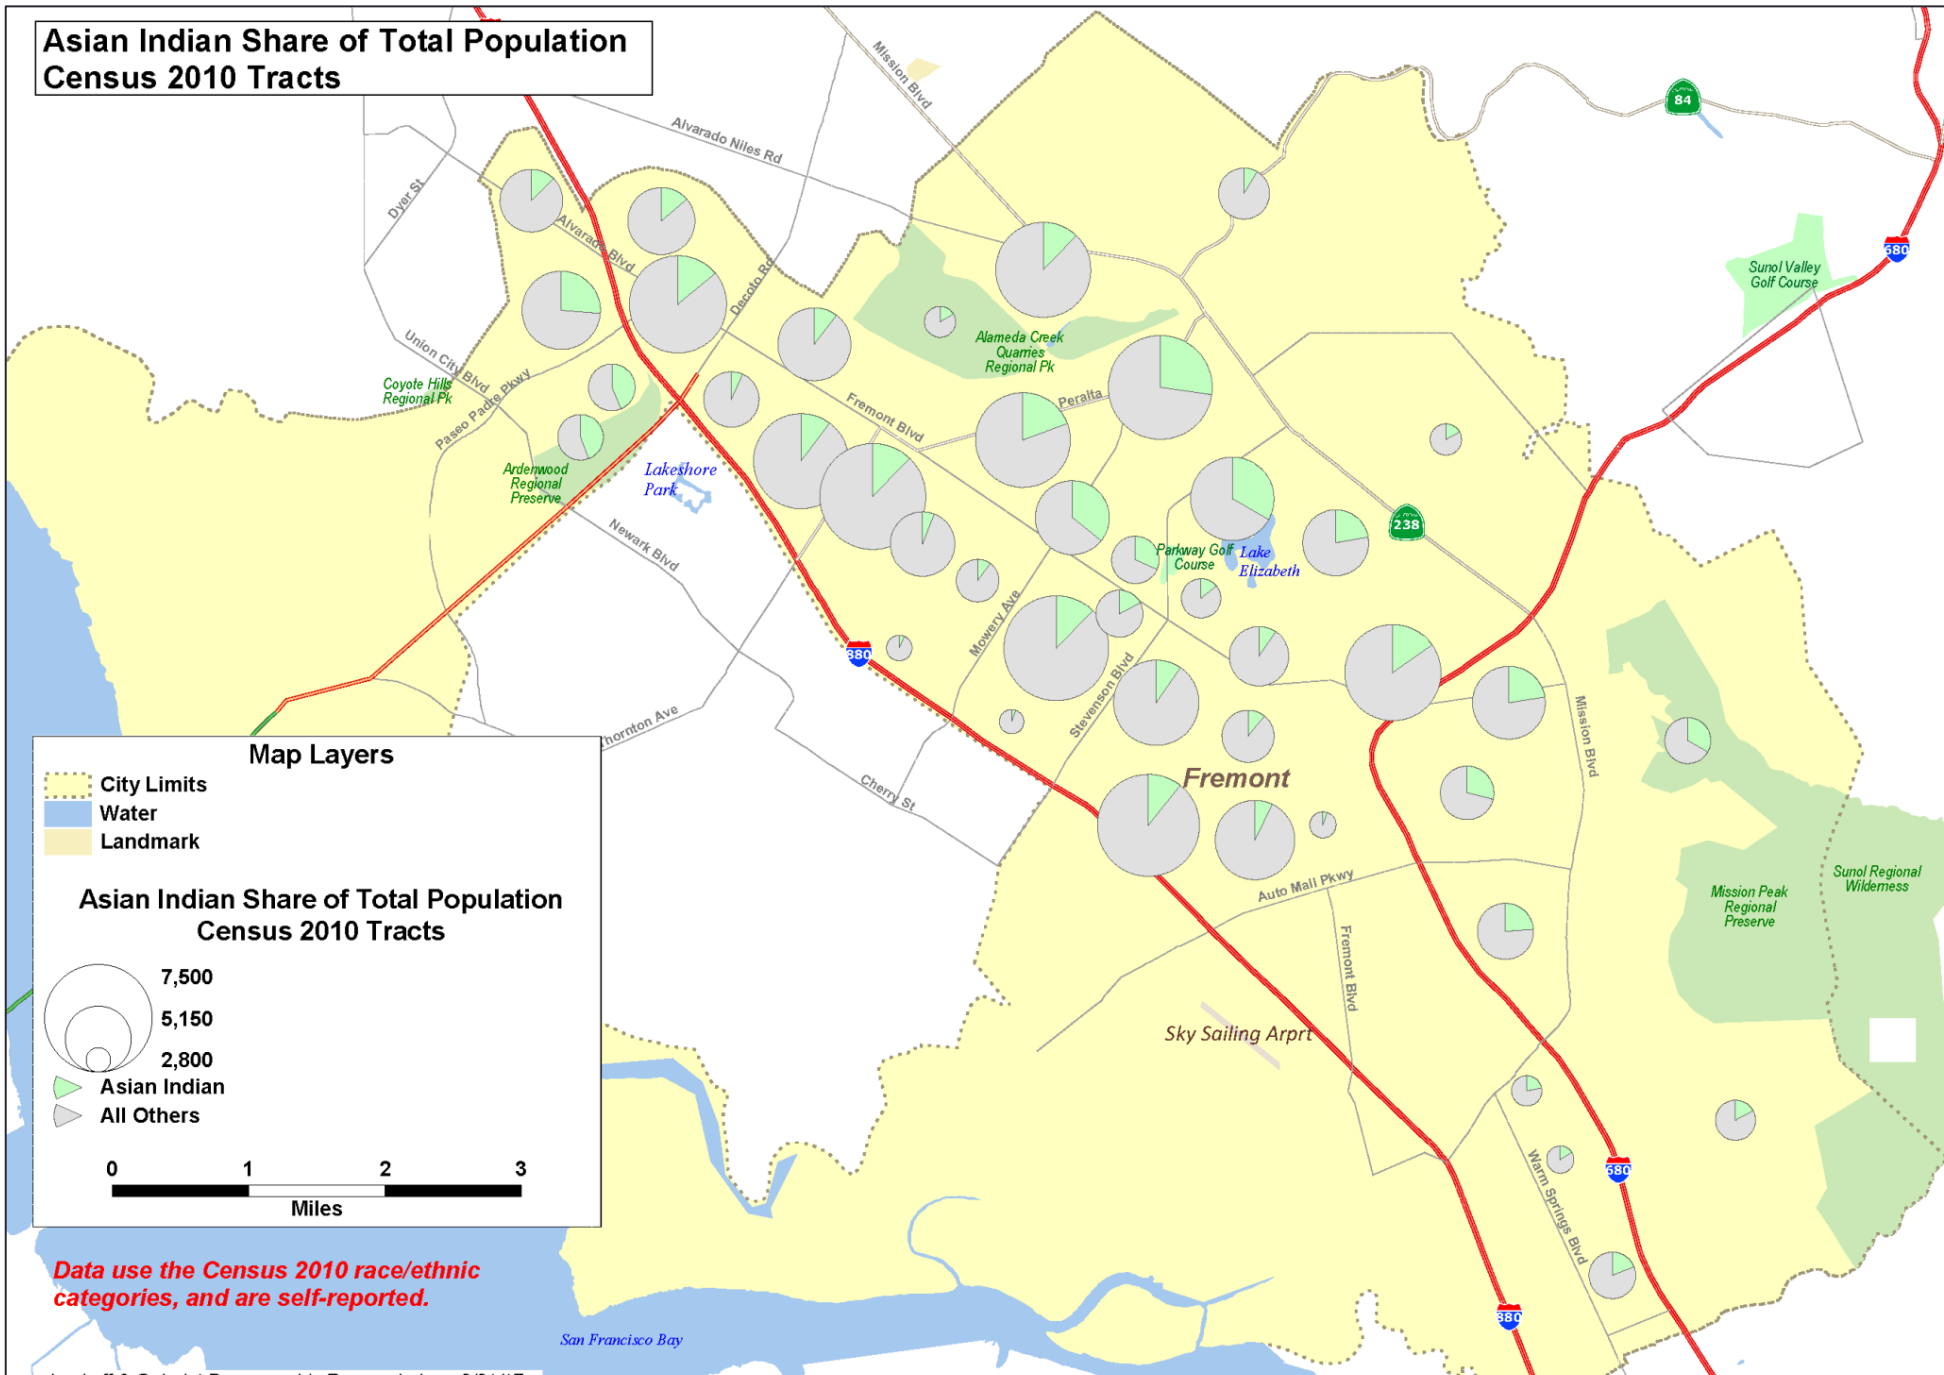

(Asian) Indian  
subgroup  
population

2010 Summary  
File 2 population  
counts

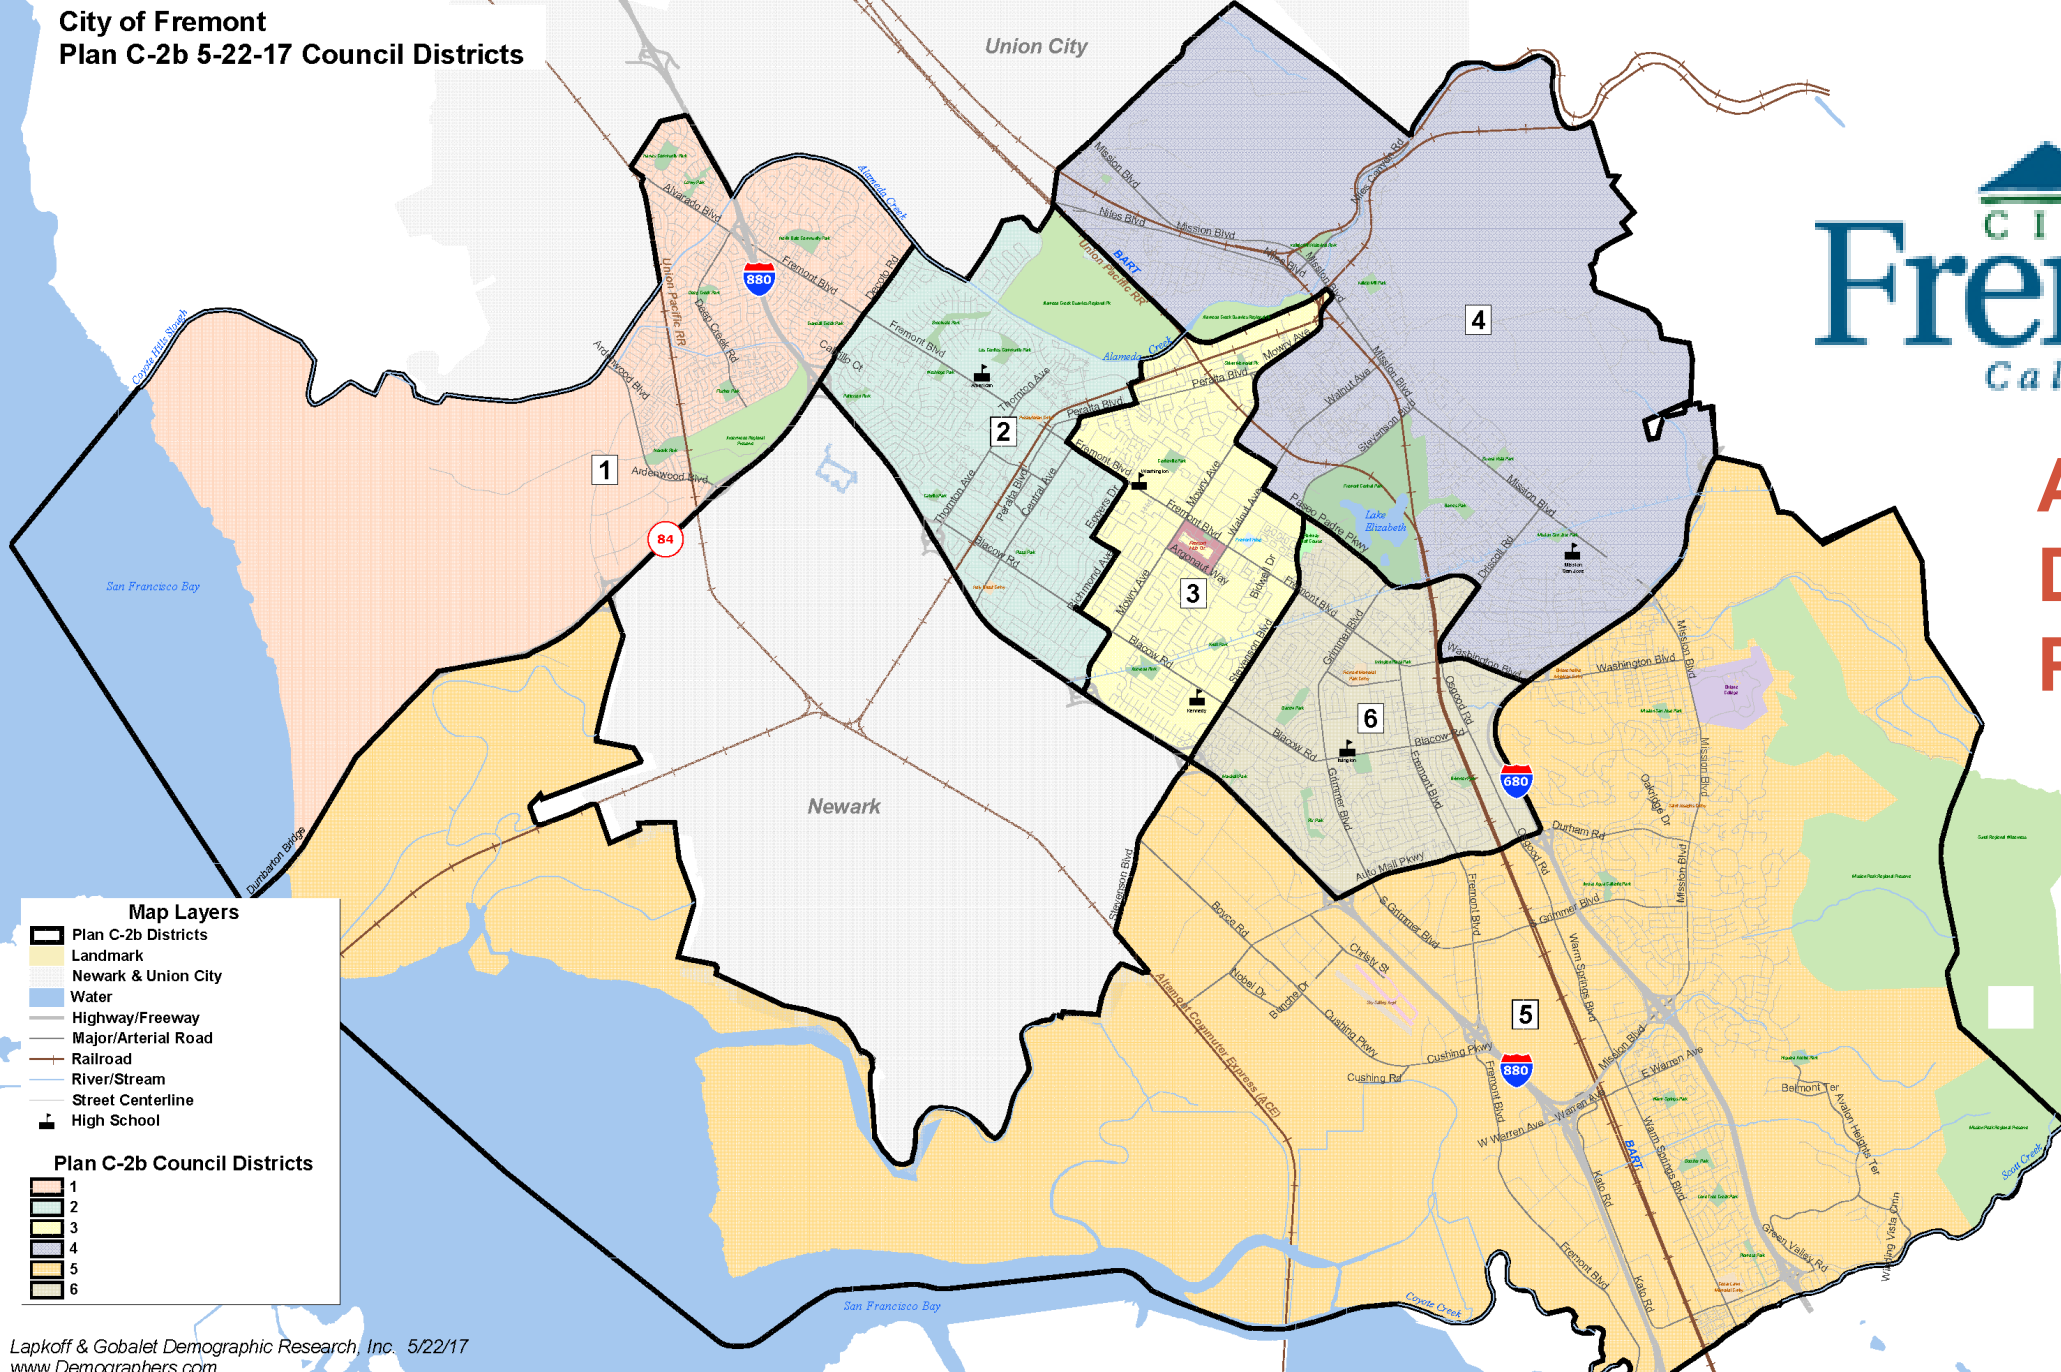

(self-identified  
community of  
interest)

## Adopted Districting Plan

*Plan took into  
account the  
concentrations  
of Afghani  
businesses*

### Map Layers

- Plan C-2b Districts
- Landmark
- Newark & Union City
- Water
- Highway/Freeway
- Major/Arterial Road
- Railroad
- River/Stream
- Street Centerline
- High School

### Plan C-2b Council Districts

- 1
- 2
- 3
- 4
- 5
- 6

# Case Study 2: Do data support separate communities of interest for Asian subgroups?

**Another Silicon Valley jurisdiction:**

**Search for evidence that supports consideration of Chinese and Asian Indians as separate Communities of Interest using racially polarized voting analysis**

**Step 1: Identify geographical concentrations of subgroup voters (registered and actual) in the jurisdiction, by voting precinct**

**Step 2: Study voting patterns of subgroups, by voting precinct (Ecological Regression + Ecological Inference)**

## Step 2: Racially Polarized Voting analysis (using EI and ER) show that Chinese and (Asian) Indian voters sometimes support different candidates

### Chinese Surname Voters in 2018 Election:

#### Moderate Evidence of RPV

candidate	ER Est % of Chinese Surname Vote	ER Est % of non-Chinese Surname Vote	ER Chinese Surname R^2	EI Est % of Chinese Surname Vote	EI Est % of non-Chinese Surname Vote	EI Chinese Surname p-value
Chinese surname female candidate	67	40	0.22	66	40	2.24e-38
Asian Indian surname male candidate	19	56	0.51	18	56	1.87e-63
Chinese surname male candidate	67	24	0.65	65	25	4.54e-90

### Asian Indian Surname Voters in 2018 Election:

#### Little Evidence of RPV

Candidate	ER Est % of Asian Indian Surname Vote	ER Est % of non-Asian Indian Surname Vote	ER Asian Indian Surname R^2	EI Est % of Asian Indian Surname Vote	EI Est % of non-Asian Indian Surname Vote	EI Asian Indian Surname p-value
Chinese surname female candidate	58	43	0.031	52	43	4.32e-02
Asian Indian surname male candidate	18	55	0.195	22	54	1.48e-15
Chinese surname male candidate	76	25	0.371	72	26	1.40e-38

# Chinese surname candidate preferred by Chinese surname voters

## Ecological Inference

by voting precinct

**Chinese** surname  
candidate slightly  
preferred by  
**(Asian) Indian**  
surname voters

**Ecological Inference**

by voting precinct

**Asian Indian Candidate NOT preferred by Chinese- or (Asian) Indian-surname voters**

# Conclusions:

- **Sometimes it's important to distinguish among race/ethnic subgroups when redistricting**
  - In Silicon Valley, California, Chinese and (Asian) Indian surname residents consider themselves to be separate communities of interest.
  - Voting behavior and testimony by subgroup members support treating Asian subgroups as separate communities of interest in Silicon Valley.
- **We need ACS estimates + local administrative data (voter records) to distinguish among these subgroups because they are separate communities of interest.**

# All Asians are Not Alike:

## Using ACS and Administrative Data

### Estimates of Asian Subgroups in Political Redistricting
